Decision gate: if PAM does not surpass Tier 2, Tier 3 targets are adjusted before investing in WP3
Tier 1
WP1
Tier 1: Validation
Copy Task (T=100–5,000)
Adding Problem (T=100–5,000)
MNIST / Omniglot recall
Purpose: Confirm core memory
Baselines: LSTM, GRU, S4
Tier 2
WP1
Tier 2: Field Positioning
ETTh1/h2, Weather, ECL, Traffic
Horizons: $\{96, 192, 336, 720\}$
Metrics: MSE, MAE
Purpose: Match SOTA forecasting
Baselines: PatchTST, iTransformer, Mamba
Tier 3
WP1–2
Tier 3: Core Thesis
sMNIST (T=784)
Path-X (T=16,384) — gold standard
Memory Maze (T=2–10K)
Infinite dSprites (T=2–50K)
Purpose: Prove long-range claims
Baselines: S4, Mamba, DNC
Tier 4
WP3
Tier 4: Continual Learning
Split MNIST / CIFAR (5 tasks)
Concept drift benchmarks
TSCIL (UCI-HAR, WISDM)
Purpose: Test memory consolidation
Baselines: EWC, SI, replay
Increasing sequence length, task complexity, and ecological validity ⟶
