

Discovery 1

copper wire

copper plate

step ~2,000

Discovery 2

circuit

wire + iron

step ~8,000

New goal

blueprint requires
50 circuits

step ~15,000

Required

recall dependency chain;
reason about bottlenecks;
adapt the layout

memory across >10,000 steps

No current architecture:

✗ Transformers — attention fades beyond context

✗ SSMs — compressed into fixed-size state

✗ MANNs — no causal model of what to store
